

WMS Features List

- Detailed parameters and data files to recreate multiple operating scenarios.
- Totally flexible storage location set-up, with all types handled by unique definable rules. Controls for size, weight and volume, and settings for media, product mix, pick-face, ABC class, exclusion, sequencing and proximity.
- Multiple product definition factors, for type, configuration and rotation. Individual receipt and rotation ID allowed, with product level definition of size, weight, volume, allowable media and capacity ratios.
- Management of kitted, sub-kit and substitution products.
- Individual accounts for contract and third party applications. Account level definition of receipt and despatch rules, rotation and handling factors, product code format.
- Receipt advice (ASN) module for electronic or manual input, with check sheet and automatic media label (including EAN format) production standard.
- Flexible receipt option, with media label (including EAN format) print standard.
- Receipt option screens (PC or RF) can be formatted to match operational profile.
- Vehicle booking diary for 90-day advance booking. Slot definition by minimum turn-round time and variable offload criteria.
- Configurable cross-docking options for held and non-stock held (pick to zero) products.
- Production receipts module for manufacturing stock receipts.
- Putaway process supports user-select and auto-placement options. Product location by ABC, sequence, preferred and excluded locations and product factor.
- Product visibility within intermediate (non-storage) locations throughout putaway process.
- Facilities for auto-QC sampling, sample processing, residual stock and re-merging. Grading facilities linked to putaway preferences.
- Serial number recording at receipt and despatch for any stored item. Handling media (pallets roll cages etc) tracking by unique serial number.
- Facilities to handle non-stored product, 'pick to zero' and OTB operation.
- RF or voice unit options for receipt and put-away. Option to process pre-advised and 'blind' receipts.
- Scheduled or ad hoc putaway task management.

- Standard reporting of detailed stock movement and location data, available in screen or printed format.
- Report creation via ODBC using industry standard tools. Standard pre-defined Crystal suite available.

Detailed movement history with archive, storage and retrieval facilities.

- Audit process for all parameter file or static data amendments.
- Flexible third party charging by multiple category and rate band. Pre-set and ad-hoc charging, auto-calculation and invoice production.
- Ownership transfer for third party stock.
- Exception reports for performance measure against advised or expected figures.
- Process monitor to alert specified items outside stated tolerances.
- Extensive web-based reports for remote on-line enquiries.
