

TDG TEMPERATURE CONTROLLED SERVICES GOES EMPIRICA

The temperature controlled division of TDG Ltd is implementing the Empirica WMS system at its flagship site in Peterborough. TDG Ltd, part of the TDG Group is a third party storage and logistics company with around 20 temperature controlled storage facilities in the UK.

The Peterborough site provides third party storage and logistics services, and holds around 8,500 pallets in frozen and chilled storage, across seven chambers. The Empirica system will be used to control receipt and despatch of product stored on behalf of several food manufacture customers.

The system, which is expected to go live in Q1, 2008, will be flexible enough to support a wide range of facilities offered to TDG customers including EDI, web access to stock data, complex reporting requirements and varied invoicing needs.
